

To whom it may concern,

My name is Larry Gee and I currently work as a consultant and as a professor at San Jose State University. I have a MBA in Business Administration and a MS in Computer Science, as well as a Masters certificate in Project Management and an Advanced Project Management certificate from Stanford University. In terms of experience, I worked at IBM for 32 years, reaching the top 2% of the company, holding positions such as West Coast CIO for the Software Group, Business Information Executive, and Certified Project Executive.

When I first met Cameron during the Summer term of 2016, he was a high achieving student who was still searching for what he was passionate about. At the time he recently set his mind on Software Engineering and was taking courses to have a productive summer. I hired him as my assistant and for the past three semesters I have gotten to get to know the Cameron outside of academia. I have seen him challenge himself and pursue new interests, all while taking care of all his responsibilities. One of the topics we often discussed was his honor society, Tau Beta Pi, and I watched Cameron work his way up in the organization. As he consulted me on his speech for the Tau Beta Pi Presidency, I could see all effort and care he had for his organization.

His interests do not stop there; whether it be learning to pilot a plane, ride a motorcycle, or how to become a freelance photographer on the side, Cameron never stops learning new skills and enjoying what the world has to offer. This is a well-rounded student who is not only great to work with but also enjoyable and inspiring to have around.

Sincerely,

Larry Gee
